PROFESSIONAL SUMMARY

Offensive Security Certified Professional (OSCP) focusing on manual exploitation, Active Directory attack paths, and web application penetration testing. Executes Assumed Breach methodologies, utilizing initial domain credentials to escalate privileges and engineer custom exploit scripts in Python, Bash, and Rust. Integrates AI-driven CLI workflows directly into terminal environments to automate vulnerability analysis and payload prototyping.

TECHNICAL SKILLS

- **Security Domains:** Web Application Penetration Testing, Active Directory Exploitation, Privilege Escalation, Cloud Security
- **Languages:** Python, Bash, SQL, Rust
- **Tools & Infrastructure:** Kali Linux, Git, Burp Suite, BloodHound, Metasploit, Nessus
- **AI & Automation:** Gemini CLI, Claude CLI, LLM-Assisted Payload Prototyping and automation

CERTIFICATIONS & EDUCATION

- **Offensive Security Certified Professional (OSCP+)** | OffSec April 2026
- **B.Tech - Computer Science and Engineering** | Atal Bihari Vajpayee Government Institute of Engineering & Technology - Shimla

TECHNICAL PROJECTS

HackTheBox Seasonal Campaign Spring 2026

- Achieved global Platinum Tier ranking.
- Exploited hardened targets to execute network and application-level attacks.

Enterprise Active Directory Attack Lab 2025–2026

- Executed cross-forest trust exploitation and delegation abuse.
- Mapped attack paths using BloodHound to identify vulnerabilities.
- Engineered custom scripts to facilitate lateral movement.

Penetration Testing & AI Exploit Development 2024–2026

- Compromised 300+ machines across Proving Grounds Practice, VulnLab, and HackTheBox.
- Integrated Gemini and Claude CLIs to automate reconnaissance and parse vulnerabilities.
- Prototyped and deployed custom Python and Bash payloads.
