PROFESSIONAL SUMMARY

OSCP+ certified offensive security professional with hands-on experience in manual exploitation, Active Directory attack paths, web application penetration testing, and VAPT engagements. Proven track record across 300+ compromised machines on HackTheBox, Proving Grounds, and VulnLab — including a Platinum Tier finish in HackTheBox's competitive season. Skilled in network, web, API, and mobile application security assessments, with strong proficiency in Python, Bash, and PowerShell for custom exploit development and tooling. Adept at delivering clear technical reports and communicating findings to both technical and non-technical stakeholders.

CERTIFICATION

Offensive Security Certified Professional (OSCP+) · OffSec

April 2026

TECHNICAL SKILLS

Security Domains	VAPT (Web, Network, API, Mobile), Active Directory Exploitation, Privilege Escalation, Red Team Operations, Cloud Security, Secure Code Review
Languages	Python, Bash, PowerShell, SQL
Tools & Platforms	Burp Suite, Nessus, Metasploit, BloodHound, Impacket, Nmap, Kali Linux, Git, HackTheBox, Proving Grounds, VulnLab
Methodologies	OWASP Top 10, MITRE ATT&CK, PTES, CVE/NVD, Vulnerability Management

TECHNICAL PROJECTS

HackTheBox Seasonal Campaign

Spring 2026

- Attained **Platinum Tier** global ranking — top competitive percentile across thousands of active participants during the season.
- Compromised 10 of 13 hardened target environments by bypassing defensive mechanisms, evading detection, and establishing persistent access — demonstrating real-world red team TTPs.

Enterprise Active Directory Attack Lab

2025 – 2026

- Built a self-hosted multi-domain Windows AD environment and executed full attack chains: cross-forest trust exploitation, Kerberoasting, constrained/unconstrained delegation abuse, and DCSync.
- Mapped attack paths with BloodHound; developed custom Python and PowerShell scripts for automated lateral movement and credential harvesting.
- Simulated assumed-breach scenarios end-to-end — from initial access and privilege escalation through lateral movement to full domain compromise, aligned with MITRE ATT&CK framework.

Manual Penetration Testing & Exploit Development

2024 – 2026

- Compromised **300+ machines** across HackTheBox, Proving Grounds Practice, and VulnLab — covering Linux, Windows, web applications, APIs, and Active Directory at intermediate to advanced difficulty.
- Conducted web application VAPT across OWASP Top 10 vulnerabilities including SQL injection, XSS, IDOR, SSRF, and authentication bypasses; performed API security testing and parameter manipulation.

- Developed custom Python and Bash scripts for vulnerability triage, reconnaissance automation, and payload prototyping; prepared detailed remediation-focused reports for each engagement.

Web & API Security Research

2024 – 2026

- Performed end-to-end web application testing including broken access control, injection flaws, insecure deserialization, and business logic vulnerabilities aligned with OWASP methodology.
- Conducted API security assessments targeting REST endpoints — testing for excessive data exposure, broken object-level authorization, and rate-limiting weaknesses.
- Documented all findings with clear risk ratings, proof-of-concept steps, and actionable remediation guidance suitable for both technical and non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Valen Agency · Shimla, India

Dec 2025 – Present

Operations & Technology Lead

- Owned end-to-end technical operations including infrastructure management, security tooling selection, and workflow automation for a technology-focused agency.
- Led client communications and coordinated cross-functional project delivery across design, development, and operations teams — building strong written and verbal communication skills applicable to security report delivery and stakeholder briefings.

EDUCATION

B.Tech in Computer Science and Engineering

2025

Atal Bihari Vajpayee Govt. Institute of Engineering & Technology, Shimla
